

Employee Support Al-based Chatbot

An Artificial Intelligence chatbot to share internal information with your teams. All they need to do is ask.

CUSTOMER

About SK Innovation Co

SK innovation is Korea's first and largest energy chemical company, currently employing over 6.500 people across 6 business divisions.

As one of Korea's most coveted workplaces, recruitment teams regularly deal with huge volumes of inbound applicant questions regarding the hiring process.

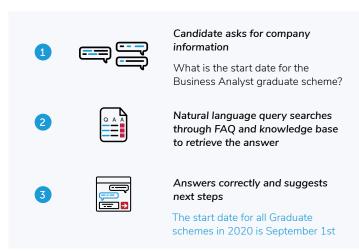

CHALLENGES

Prior to using 42Maru, recruitment teams would manually reply to candidates through phone, instant chat and email, all causing an organisational headache and drain on time.

More than a 5000 new applicants contact SK Innovation during their open recruitment season each year, asking about work conditions, role and position details and location arrangements which differ between each business area.

From working conditions to salary incentives, recruiters encounter a wide range of questions and can have specifics within each business unit. Prior to using 42Maru, the company dedicated a team to handle inbound recruitment queries. SK Innovation wanted to automate inbound queries, while providing candidates with the information they need.

42MARU SOLUTION

Questions are understood by the ${\bf semantic}$ and ${\bf paraphrasing}$ engine however they are asked

APPLIED TECHNOLOGY

Semantic search tries to understand the user's intent instead of keyword matching alone. Topics and concepts can be linked and related information can be suggested.

Information Retrieval allows for data, in various forms, to be organised for easy access and indexed for quick retrieval. Search decides what content, and in what form you see whenever you enter a query.

Natural Language Understanding tries to deduce what questions mean, regardless of the way they are expressed, allowing users to interact with the computer using natural

sentences

Question and Answering (QA) uses a combination of language manipulation and search techniques to offer a direct answer to questions posed by humans in a natural language.

Paraphrasing allows search results to include words not directly used in the query. It recognises that there may be multiple ways to ask a question, that all refer to the same answer.

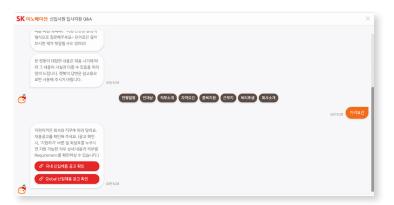

Unstructured data → Useful for business

42MARU SOLUTION (CONT)

 $42\mbox{Maru}\mbox{'s}$ HR and Recruitment chatbot automatically answers inbound candidate questions, including general and role-specific information.

Trained on previously asked questions, this project lasted 5 weeks, from preparing the datasets to launching the service and now operates companywide to assist recruiters.

Candidates are guided through the recruitment process, giving instant answers to their questions

TECHNOLOGY HIGHLIGHT

Al-enabled FAQ: Upload your frequently asked questions, along with answers and give customers access to interact through a chatbot or voice interface. With AI FAQ, users can ask in natural language and automatically match to the correct answer.

BENEFITS

Customised for the purpose and question-answer dataset required

Removing reactive responses allows focus on higher value-adding activity

Candidates have a fast and clear interaction with sources to self-educate

OTHER APPLICATIONS

More examples of chatbots supporting employees:

Finance and HR

Automate answering of questions for frequently asked topics including time-off management, expense tracking and HR queries

Customer service

Answer questions from client representatives, providing information on product specifications, workflows and resources

LET'S BUILD THE CHATBOT TO SUPPORT YOUR PEOPLE
